SUMMARY

I am software engineer. I've done front-end, back-end development. And even building cli tools for various usage. My tech stack is many, visit my [portfolio](#) for more.

I use Arch Linux as my main operating system, I like it since it fast and parallel with my belief which is simplicity. I'm strong believer in UNIX philosophy when writing a program.

SELECTED PROJECTS

17 total projects i've ever done; below are some of it.

FRONT-END

- [healtyu](#) - A website for booking wellness tourism activities. HTML, CSS & Javascript for frontend., Firebase auth for authentication, Firebase firestore for database.
- [Image-Search-Application](#) - Simple image searching using Unsplash API with Javascript.
- [personal-website](#) - My personal website. This is my first ever website i build completely on my own.

BACK-END

- [vbook-rest-api](#) - My first ever REST API. Build using NodeJS/Express & MongoDB/Mongoose. And Postman for testing.

FULL-STACK

- [gompiler](#) - An online or live Golang compiler. The tech stack that is used is: Plain html, css & javascript for frontend., Golang with Gin for the backend., Docker for containerization.
- [tiktokless](#) - Essentially tiktok... except without all the bad that comes with it. Visit the github for more. Golang with gin for backend, plain html, css and javascript for frontend.

CLI, GAME, ML

- [taskm](#) - CLI based task manager (supposedly) - for linux. Written in Golang.
- [zipper](#) - An simple CLI tool to zip and unzip file written in Golang.
- [battleship](#) - A terminal based of the famous battleship game board with COM player. Written in Python.
- [rockpaperscissors-img-classifications](#) - Just a simple image classification with python and tensorflow. It used to classify wether the image given is rock, paper or scissor.

CERTIFICATES:

- Machine learning - Dicoding (I got 4 star in the final assignment)
- Python - Dicoding
- Data Visualization - Dicoding, dll.

EDUCATION

BACHELOR'S DEGREE OF INFORMATION TECHNOLOGY

UNISA Yogyakarta

2022 - now
