Summary

Software Engineer with hands-on experience in backend and frontend development, specializing in building web applications and system-level projects. Experienced in designing RESTful APIs, implementing authentication and authorization systems (JWT, RBAC), and working with relational (SQL) and NoSQL databases.

Built own programming language in Go and an HTTP library from scratch to deepen understanding of system internals and networking fundamentals. Strong believer in clean architecture and UNIX philosophy principles.

Technical Skills

- Languages: Go, Javascript, Python, PHP
- Web Technologies: React, Laravel, NodeJS (ExpressJS)
- Database: MongoDB, PostgreSQL, MySQL, Redis
- Concepts: REST API, JWT Authentication, RBAC, HTTP Protocol, Monolithic Architecture
- Tools: Git, Linux (Arch Linux), Docker, AWS, Postman

Experience

Product Intern PT Aino Teknologi Oct 2024 – Dec 2024

- Developed an internal ERP system (Project Dashboard) using Laravel and PostgreSQL.
- Implemented Role-Based Access Control (RBAC) to manage user permissions across different project roles.
- Designed and developed the Frontend, the Backend and the RESTful APIs.
- Contributed to improving internal project tracking and management.

Teaching Programming (proker KKN) SMK Muhammadiyah 1 Playen August 2025

- Taught basic programming concepts to vocational high school students (TKJ major).
- Used Bahasa Indonesia-based programming language (BAIK) to help students understand programming logic more intuitively.
- Designed structured learning materials to accelerate students' understanding of core programming concepts.

Selected Projects

Kusmala – Interpreted Programming Language

Github: github.com/Vricap/kusmala

Live Demo: <https://ku-7a61eb073c154657985fb0a5e6bce6e6.ecs.ap-southeast-1.on.aws/>

- Developed my own interpreted programming language with Indonesian-based syntax.
- Built lexer, parser, AST, and interpreter in Go.
- Designed language grammar and execution model from scratch.
- Built live/online kusmala playground for an easy online usage.

Gherver – HTTP Server from Scratch

Github: github.com/Vricap/gherver

- Built my own HTTP library from scratch in Go.
- Implemented TCP socket handling, HTTP request parsing, and response lifecycle manually.
- Deepened understanding of HTTP protocol and low-level networking concepts.

DMS AINO – Document Management System

Github: github.com/Vricap/dms-aino

Live Demo: dms-aino.onrender.com

- Developed a web-based Document Management System for PT AINO Indonesia as part of Capstone Project in Uni.
- Role as the only programmer in the group.
- Support Upload, View, Send, Sign, Audit, Filtering and Delete document.
- Implemented sequential, parallel, and group-based digital signing workflows.
- Designed and developed the frontend (React), the backend (Node.js + Express) and the database (MongoDB + Mongoose).
- Implemented JWT authentication and RBAC authorization.
- Implemented RESTful API architecture in a monolithic system.

Education

- S1 in Information Technology, UNISA Yogyakarta.

2022 – 2026

Certificate

IPK: 3.65

- Machine Learning – Dicoding (Final Project: 4/5)
- Backend Developer – Dicoding (Final Project: 5/5)
- AWS cloud – Dicoding
